

The Employee Health and Well-being department of The University of Texas M. D. Anderson Cancer Center **requires all educational trainees to provide documentation of immunizations** or serological proof of immunity to varicella. Baseline screening for Tuberculosis (TB) is also required. This consists of the following:

- TB test within the previous 12 months or
- Documentation of a previously positive TB skin test. *If there is documentation of a positive TB skin test (over 10 mm induration.), a chest x-ray report completed after the positive TB test, must be provided. Previous BCG vaccination does not contraindicate receiving a TB skin test.*

Please submit an immunization record using the form provided by M. D. Anderson Employee Health and Well-being. **Include complete dates of immunizations requested in all fields (month, day and year), and attach all applicable lab reports and x-rays. The form must be signed by a physician or an authorized health care provider**

- *Please note that additional documentation of immunizations may be required for specific programs. MD Anderson Cancer Center encourages all educational trainees to have a complete immunization record, which would include vaccines for measles, mumps and rubella, a booster dose of tetanus/ diphtheria or tetanus / diphtheria/ pertussis within the previous 10 years. Hepatitis B vaccine is also recommended for those trainees who will have direct patient contact or contact with blood or body fluid.*

Frequently asked questions

What should I do if I don't have immunization records?

You can either repeat the vaccinations or have your medical provider obtain a blood sample to test for serological confirmation of immunity. (Please send lab reports with your immunization record.)

I have had varicella (chicken pox), but I don't have any record. What should I do?

Employee Health and Well-being will accept a verbal self-report of varicella.

What if I don't know if I have had varicella (chicken pox)?

If you are you're not sure you have had chicken pox, the infection, a blood test will indicate if you have immunity. If you don't have immunity, you will need two doses of vaccine at least one month apart.

Can I get the immunizations in the Houston area?

There are clinics close to M. D. Anderson that can administer needed vaccines; the attached Immunization Resources sheet lists several of these clinics. The individual student will be responsible for the required fees.
