

Advanced Medicine

We recognize that some children who come to us for transplant are in a fragile state of health. To help a child through transplant, we have a full compliment of medical services available, which may be tailored to the needs of the young patient, including a dedicated pediatric intensive care unit.

Advanced Care

The financial and emotional stresses that transplant places on the family are enormous. Our team of dedicated therapists and counselors will help guide the child and family through the transplant process.

The Future

New research in transplant has opened up new possibilities for cell therapy. At M. D. Anderson, our team of scientists is investigating ways to reduce toxicity without compromising the anti-cancer effect.

What Else Should I Know?

A transplant is not a choice that parents or children want to make, but for some it is often the only option. The Children's Cancer Hospital Cell Therapy team realizes this is a difficult decision. This team will work with families to provide resources that can help you and your child make the best choice for treatment.

For a referral or further information, please call 713-792-5410 or contact us online at www.mdanderson.org/children.
