

Bionutrition Research Core Services

The Bionutrition Research Core offers a range of clinical and community-based nutrition research services across the cancer continuum, from prevention, to treatment and survivorship. We encourage investigators to contact us early in the study process. Contact us for a consultation and information about fees for service.

Dietary Assessment

- *Consultation regarding best practices for dietary data collection, including food diaries, dietary recalls, and food frequency questionnaires using validated, web-based methods*
- *Computerized analysis of dietary intake using the Nutrition Data System for Research (NDSR) software*
- *Research team training for dietary assessment data collection*
- *Advanced statistical analysis of collected dietary data*

Nutrient-Controlled Feeding Studies

- *Assistance with nutrition-related protocol development and implementation*
- *Assistance with screening potential subjects for dietary investigation*
- *Development and implementation of study-specific research diets, including: participant interviews, caloric needs assessment, menu planning and recipe development per protocol with ProNutra software, and compliance monitoring*

Nutrition Education

- *Instructions for dietary regimens and nutrition education*
- *Research-related clinical and community-focused nutrition counseling and education*
- *Cooking demonstrations*
