The University of Texas MD Anderson Cancer Center is accredited by the Commission on Colleges of the Southern Association of Colleges and Schools (SACS) to award degrees at the baccalaureate, master’s and doctoral levels.

School of Health Professions  
Master of Science in Radiologic Sciences  
Provides the knowledge and skills for professional advancement in healthcare and higher education.
We conducted a national research study in 2010 and found that there was a predicted shortage of radiologic sciences professionals who were qualified to take on leadership positions in the industry. It was evident many director and faculty positions require an advanced degree, and there are very few master's programs in the field. As baby boomers begin to retire, there will be a greater need for qualified professionals to take their places.

William Undie, Ed.D., School of Health Professions
Program Director for Radiologic Sciences

The emerging healthcare environment has created pressures that have heightened the need for innovative and dynamic leadership. There is an urgent need for individuals who embody effective and compassionate care in a cost-efficient and integrated healthcare system. Further, there is a shortage of qualified educators to fill many job positions in the radiologic sciences profession; the situation is expected to escalate in the next decade as vacancy rates increase due to attrition, retirement, industry growth and limited numbers of academic programs. Thus, this leadership program is intended to enhance your knowledge, expand your critical thinking skills, and strategically position you for a leadership position in the healthcare and academic environment.

The School of Health Professions at The University of Texas MD Anderson Cancer Center can help you achieve your goal of a Master’s degree at a fraction of the cost from comparable programs. Secured by a prestigious reputation and recognized for excellence in cancer care and academics, the School of Health Professions provides rigorous and relevant degrees programs, in a vibrant learning environment that is connected to a thriving hub of scientific collaborations at the prestigious Texas Medical Center.

Students enrolled in the program come from a wide spectrum of specialties in the radiologic sciences profession, bringing an extensive variety of academic and professional backgrounds as well as experiences. As a cross-disciplinary community of peers, you will progress through the program as a cohort by forming a broad network of colleagues that will endure throughout your professional career.

Students explore contemporary issues and practices in healthcare or higher education while acquiring analytic, leadership, and management skills to influence organizational successes. The two program specializations combine practical skills development with theory and case studies to prepare students to assume leadership positions in healthcare management or radiologic sciences educational programs. The goal is to provide students with a clear understanding of the challenges confronting the stakeholders in healthcare and higher education and to demonstrate how you can play a critical role in contributing to the solution.

All students complete the programmatic core classes within the first two semesters, which provides the basic foundation in administrative discipline including: healthcare systems, strategic management and business policy, research methodology and legal and ethical fundamentals of healthcare. The core is intended to enhance cross-functional integration and strengthen leadership training in key administrative areas. During the third semester, you should have a robust set of skills ready to tackle your specialty emphasis in either administrative or educational leadership, as well as your thesis.

The program leverages on the unique expertise and experience of MD Anderson Cancer Center faculty by providing students with access to a cadre of faculty that has a depth of experience in the healthcare industry, and are fully engaged in addressing constraints and problems in healthcare and higher education.
