Neutropenic Fever Outpatient Treatment For Solid Tumor Patients (15 years and older)

This practice algorithm has been specifically developed for MD Anderson using a multidisciplinary approach and taking into consideration circumstances particular to MD Anderson, including the following: MD Anderson’s specific patient population; MD Anderson’s services and structure; and MD Anderson’s clinical information. Moreover, this algorithm is not intended to replace the independent medical or professional judgment of physicians or other health care providers. Based on general principles, local microbiology and susceptibility/resistance patterns should be taken into consideration when selecting antibiotics.

NOTE:
This algorithm is currently undergoing updates by the Neutropenic Fever Workgroup at the University of Texas MD Anderson Cancer Center.
