

Every patient's image is interpreted by a fellowship-trained breast radiologist. This higher level of expertise means patients receive precise, accurate results they can trust.

Breast Imaging

MD Anderson Cancer Center is committed to taking a comprehensive team-based approach to caring for breast patients — from breast screening through diagnosis, treatment and survivorship.

We have one of the largest breast imaging programs in the nation, including more than 35 fellowship-trained breast radiologists, highly trained technologists, and a dedicated group of nurse navigators all focused on the care of our patients.

Where you send your patient first matters.

Our breast imaging clinicians have extensive training in performing mammograms and interpreting images of the breast. This experience translates to patients receiving an accurate diagnosis and appropriate staging with fewer scans.

When a patient has an abnormal mammogram result, we have experienced oncology nurse navigators at each location to explain next step options, coordinate expedited appointments with our breast oncology teams, and communicate with the referring provider office.

Cancer screening and services available:

- Screening and diagnostic mammography with 3-D Tomosynthesis
- Breast MRI
- Breast ultrasound
- Molecular breast imaging
- Cytopathology on-site
- Breast biopsy, including stereotactic, ultrasound and MRI
- Preoperative localization, including Savi Scout and Magseed
- Bone densitometry (DXA)

Watch how MD Anderson's Multi-Team Clinic enables breast cancer patients to meet with their radiation oncologist, medical oncologist, surgeon and other specialists at their first appointment.

One in three breast imaging patients received a **change in imaging recommendation** after coming to MD Anderson for a second opinion.

Real-time results

Real-time results are made available to patients **at the time of their appointment** for all breast screening and diagnostic examinations.
